

90 DAYS, CONTINUED

The last thirty days, then what the engine does on its own.

SCALE

DAYS 61-90

- Clear Trust Gate 2 before the model touches a customer
→ **Four Trust Gates (21)**
- Populate the ROI Command Center with real numbers
→ **ROI Command Center (26)**
- Schedule the first Quarterly Capital Allocation
→ **Committee Cadence (24)**
- Decide: scale, iterate, or kill – then start the next cycle
→ **Decision Inventory (refresh)**

AT DAY 90 THE ENGINE IS RUNNING

The cadence takes it from here: weekly tactical, monthly portfolio, quarterly capital allocation. You are in motion.

HOW TO RUN THIS WITH AI

Give the model your function, industry, team size, and constraints. Then: “Turn this 90-day plan into a dated week-by-week checklist for my situation. Flag the two moves most likely to slip for a team like mine, and the smallest version of each that still counts as done. Name what I should NOT attempt in the first 90 days.”
